

4.1 Conclusion

We have successfully completed Documentation of Freedom Fighter's project. For this project I need to use HTML, CSS, JavaScript, Ajax, JQuery, PHP, MySQL and Bootstrap. It is running successfully. With this project, every person is knowing about the liberation war of Bangladesh. We use multi-language like Bengali and English. So foreign users also knowing about our liberation war properly.

Finally the contribution of our national heroes for sacrificing their life, torture and blood for the liberation war of Bangladesh that is beggar description. We have tried to bind the real history and dedication of the freedom fighters of the liberation war of Bangladesh in our small frame in <http://www.fighters71.com>.

4.2 Advantages

1. The obvious advantage to show the every citizen becomes a part of the government system.
2. It is able to represent the whole information about the freedom fighters.
3. The dignity of a person is much more of his expression than wealth that is proved by the national heroes of Bangladesh in the website.
4. It can be able to keep any information of freedom fighters in dynamically.
5. It is the good categorized source for whole world people to know about the freedom fighters of Bangladesh.
6. It is a document for the new generation for understanding the real heroes and history of the freedom fighters of the liberation war of Bangladesh.

4.3 Future Work

For making an attractive, useful and user interface website, we must have some future plan. Such as-

1. **Framework:** We make this website using row PHP code. In feature, we use a framework like laravel, codeIgniter, etc.
2. **Header Banner:** We will make an animated banner for header. For making this, we use a freedom fighter logo, a world map, a map of Bangladesh and the speech of Bongobondhu Sheikh Mujibur Rahman “এবারের সংগ্রাম, আমাদের মুক্তির সংগ্রাম, এবারের সংগ্রাম, স্বাধীনতার সংগ্রাম। - বঙ্গবন্ধু শেখ মুজিবুর রহমান” where all of this are situated in

a soil color banner like this banner. But banner must be animated. Logo comes from left side, world map comes from right side and stop in their position. Blood fall in world map and Bangladeshi map will rise. Speech of Bongobondhu comes from upper level and stop it in middle of that banner.

3. **Biography:** Adding biography for knowing about the leading person of our liberation war.
4. **Text to Speech function:** In future, we use google text to speech function. It reads all post of this website and visitor hear that.
5. **Android App:** In future, we will make an android app for this website.
6. **Language Translation:** Language translation part is not so good. When user click it's language button, it goes to index page. But it is not good practices. When I click any page for language changes, it changes that page.
7. **Other:** Adding more documents, audios and videos of our freedom fighters.
